

CONTENTS

Preface	5
List of basic symbols	7
1. INTRODUCTION	13
2. MATHEMATICAL MODELS OF SYSTEMS	21
2.1. Linear mathematical models	23
2.2. Block diagram algebra	34
2.3. Linearization	38
3. FEEDBACK CONTROL SYSTEMS	69
3.1. Controllers	69
3.2. Plants	79
3.2.1. Proportional non-oscillating plants	79
3.2.2. Non-oscillating integrating plants	83
3.2.3. Conversion of plant transfer functions	84
3.2.4. Proportional plants	84
3.2.5. Integrating plants	85
3.3. Control system stability	86
3.3.1. Hurwitz stability criterion	90
3.3.2. Mikhailov stability criterion	91
3.3.3. Nyquist stability criterion	93
4. CONTROL SYSTEM SYNTHESIS	120
4.1. Process control performance	120
4.1.1. Time domain	120
4.1.2. Integral of error	125
4.1.3. Integral of absolute error	126
4.1.4. Integral of squared error	126
4.1.5. ITAE criterion	127
4.1.6. Frequency domain	128
4.1.7. S-domain	132
4.2. Controller tuning	136
4.2.1. Experimental methods "trial and error"	138
4.2.2. Experimental Ziegler–Nichols methods	138
4.2.3. Open-loop method	139
4.2.4. Closed-loop method	140
4.2.5. Quarter-decay method	142
4.2.6. "Universal" experimental method	143
4.2.7. Modulus optimum method	145

4.2.8. Desired model method	149
4.2.9. SIMC method	152
5. DIGITAL CONTROLLERS	174
6. TWO- AND THREE-POSITION CONTROLLERS	181
7. CONCLUSION	188
References	189
Appendices	190
Appendix 1. Laplace transform – basic relations and properties	190
Appendix 2. Laplace transform – correspondences	193
